

# Deutsche Bank Secure Authenticator

How to Log in Using DBSA

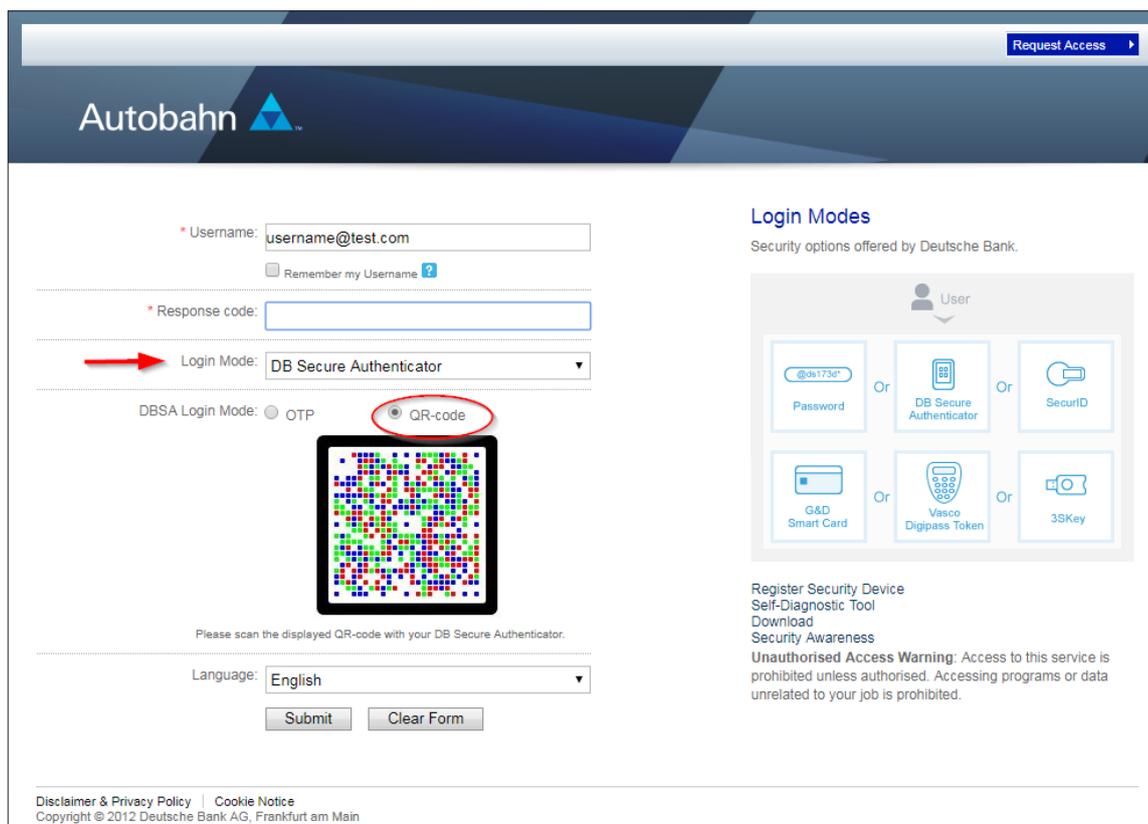

## How to log in using DBSA

The DB Secure Authenticator (DBSA) adds an additional layer of security to online banking services provided by Deutsche Bank (DB). DB Secure Authenticator provides customers with a two-factor authentication solution for logging into accounts and for authorising transactions.

This guide provides instructions on how to log in using either the Deutsche Bank Secure Authenticator (DBSA) software or hardware, scanning the QR code or using the One Time Password (OTP) to log in.

### How to login using a QR-code

- Insert username and select login mode as DB SECURE AUTHENTICATOR APP (DBSA)
- Select the QR-CODE option

The screenshot shows the Deutsche Bank login interface. At the top right, there is a "Request Access" button. The main header features the "Autobahn" logo. The login form includes a "Username" field with the value "username@test.com" and a "Remember my Username" checkbox. Below this is a "Response code" field. The "Login Mode" dropdown menu is set to "DB Secure Authenticator", with a red arrow pointing to it. Underneath, the "DBSA Login Mode" section has two radio buttons: "OTP" and "QR-code", with the "QR-code" option selected and circled in red. A QR code is displayed below the radio buttons. A red circle highlights the "QR-code" radio button. Below the QR code, there is a instruction: "Please scan the displayed QR-code with your DB Secure Authenticator." At the bottom of the form, there is a "Language" dropdown menu set to "English" and two buttons: "Submit" and "Clear Form".
